

Figure 1. The relationship between the number of children in the household and the number of children in the family. The probability of a child being in the household is shown on the Z-axis.

children in the household. The probability of a child being in the household is shown on the Z-axis. The plot shows a dense cluster of points near the origin (0,0,0) and a more dispersed cloud of points extending towards higher values on the X and Y axes, indicating a higher probability of children being in the household as the number of children increases.
